

OFFENSIVE SECURITY SPECIALIST

Zero to Hero · Ethical Hacking · VAPT · Cloud · AI · Blockchain

Master the complete offensive security lifecycle — from Linux fundamentals and network reconnaissance to cloud exploitation, AI/LLM pentesting, and blockchain smart-contract auditing. This is not a beginner's overview. It is a career transformation.

Graduates leave with a real Black Box CTF certificate, a VAPT portfolio, and the skills employers actively recruit for.

PROGRAMME AT A GLANCE

Level: Beginner
→ Advanced

Duration: 7
Weeks · ~70
Hours

Delivery: Live +
Recorded Labs

Capstone: Black
Box CTF Exam

4

Attack Phases

70+

Lab Hours

15+

Tools Mastered

1

Live CTF Final

CURRICULUM — PHASE BY PHASE

PHASE 1 Foundations & Systems Security

Build the bedrock every ethical hacker needs before touching a target.

- Linux for Hackers — CLI navigation, file permissions, user management, Bash scripting
- Networking Fundamentals — OSI & TCP/IP models, IP addressing, DNS, subnetting
- Packet Analysis — capturing and dissecting real traffic with Wireshark
- Cryptography — AES, RSA, SHA-256, SSL/TLS handshakes and certificate inspection

PHASE 2 Core Ethical Hacking & VAPT

Full hacking lifecycle — Reconnaissance to Reporting — on real environments.

- Ethical Hacking Lifecycle — all phases from Recon to Post-Exploitation to Report
- Network VAPT — Shodan, Nmap, Nessus scanning, Metasploit exploitation & post-exploitation
- Web Application Pentesting — Burp Suite mastery, OWASP Top 10: SQLi, XSS, IDOR, Broken Auth
- Mobile Pentesting — Android/iOS architecture, MobSF static analysis, Frida dynamic bypass

PHASE 3 Critical & Modern Infrastructure

Attack surfaces your clients actually use — Cloud, IoT, AI, and Blockchain.

- Cloud Pentesting (AWS) — IAM misconfigs, S3 bucket attacks, EC2 exploitation, Pacu & CloudSploit
- IoT & OT Security — Firmware extraction with Binwalk, MQTT/CoAP protocols, SCADA & Modbus
- AI/LLM Pentesting — Prompt injection, data poisoning, guardrail bypass (OWASP for LLMs)
- Blockchain & Web3 — Smart contract auditing (Solidity), Reentrancy attacks, DeFi logic flaws

PHASE 4 Capstone & Professionalism

Prove it. Report it. Get hired for it.

- Professional VAPT Reporting — Executive summaries + technical remediation with CVSS 4.0 scoring
- Black Box CTF Final Exam — Exploit a live multi-component network (Web + Cloud + Mobile)

TOOLS YOU WILL MASTER

Network	Nmap · Metasploit Framework · Responder · Wireshark · Nessus · Shodan
Web / Mobile	Burp Suite Pro · OWASP ZAP · SQLmap · MobSF · Frida · drozer
Cloud / AI	Pacu · ScoutSuite · CloudSploit · Garak · Promptfoo · Prowler
IoT / OT	Binwalk · Ghidra · Wireshark Industrial · Firmwalker · MQTT Explorer
Reporting	CVSS 4.0 Calculator · Dradis · PlexTrac · Custom VAPT templates

WEEKLY TIME ALLOCATION

01	Foundations Linux mastery · Networking deep-dive · Cryptography essentials · Wireshark labs — 10 hrs
02	Network VAPT Reconnaissance · Scanning · Exploitation with Metasploit · Post-exploitation — 10 hrs
03	Web & Mobile VAPT Burp Suite mastery · OWASP Top 10 labs · Android/iOS pentesting — 12 hrs
04	Cloud Security AWS IAM · S3/EC2 attacks · CloudSploit · Pacu automation — 10 hrs
05	IoT, OT & AI Firmware analysis · SCADA security · LLM prompt injection — 12 hrs
06	Blockchain & Reporting

07

Smart contract auditing · CVSS scoring · Professional report writing — 10 hrs

Final CTF & Exam

Live Black Box CTF · Assessment · Certificate award — 6 hrs

CAREER OUTCOMES

Penetration Tester	Red Team Operator	Bug Bounty Hunter	Security Consultant
Cloud Security Engineer	IoT Security Analyst	Web AppSec Specialist	VAPT Freelancer

CERTIFICATION ALIGNMENT

CEH (EC-Council) · OSCP (Offensive Security) · PNPT (TCM Security) · eJPT (eLearnSecurity) · CompTIA PenTest+ · OWASP Testing Guide

"Every graduate finishes with a completed Black Box CTF, a professional VAPT report, and a portfolio that proves their skills — not just a certificate that claims them."
