2026 – 2027 Edition

YOUR CAREER IN CYBERSECURITY STARTS HERE

From Zero to Industry-Ready — Offensive, Defensive, Forensics & Secure Product Development

Offensive Security

VAPT · Hacking · CTF

Defensive SOC

SIEM · Threat Intel · IR

Digital Forensics

DFIR · Cyber Law · OSINT

Secure Product Dev

DevSecOps · APIs · SDLC

THE ROBLOCKSEC MISSION

Bridging the Global Cybersecurity Skills Gap

Roblocksec was founded with one mandate: to produce job-ready cybersecurity professionals who can defend, attack, investigate, and build secure systems from day one.

We combine rigorous academic frameworks with hands-on lab environments, real-world tool mastery, and mentorship from active industry practitioners — so our graduates do not just pass certifications, they solve real problems.

Whether you are a complete beginner or an IT professional pivoting into security, Roblocksec courses are architected to meet you where you are and take you where the industry needs you.

Hands-On Lab
Validated

WHY ROBLOCKSEC?

Every cybersecurity programme promises transformation. Roblocksec delivers it through three non-negotiable pillars:

HANDS-ON LABS

Every theory module is paired with a practical lab or simulation. You will not just read about SQL Injection — you will exploit it, then remediate it.

EXPERT MENTORSHIP

Courses are designed and delivered by active security practitioners, not academics in silos. Get real answers to real-world questions.

INDUSTRY RELEVANCE

Curriculum is mapped to EC-Council, CompTIA, OSCP, and MITRE ATT&CK frameworks — so what you learn is directly what employers hire for.

"Our graduates leave with a portfolio of completed attack, defence, and forensics projects — not just a certificate. That is what makes them hireable on Day 1."

OFFENSIVE SECURITY SPECIALIST (0 → HERO)

Level: Beginner to Advanced **Duration:** 7 Weeks · ~70 Hours **Delivery:** Live + Recorded Labs

The most complete offensive security programme in the market — covering every phase of ethical hacking from Linux fundamentals to AI/LLM pentesting and blockchain smart-contract auditing.

Phase 1	Foundations & Systems Security Linux for Hackers · Networking (OSI/TCP-IP) · Cryptography (AES, RSA, SHA-256) · Wireshark · Packet Analysis
Phase 2	Core Ethical Hacking & VAPT Recon to Report lifecycle · Network VAPT (Shodan, Nmap, Nessus, Metasploit) · Web AppSec (Burp Suite, OWASP Top 10) · Mobile Pentesting (MobSF, Frida)
Phase 3	Critical & Modern Infrastructure Cloud Pentesting — AWS (Pacu, CloudSploit, IAM, S3, EC2) · IoT/OT Security (Binwalk, SCADA, Modbus) · AI/LLM Pentesting · Blockchain & Web3 Smart-Contract Auditing
Phase 4	Capstone & Professionalism Professional VAPT Reporting with CVSS 4.0 · Black Box CTF Final Exam (Web + Cloud + Mobile network)

TOOLS YOU WILL MASTER

Network	Nmap, Metasploit, Responder, Wireshark
Web / Mobile	Burp Suite, OWASP ZAP, MobSF, Frida
Cloud / AI	Pacu, ScoutSuite, Garak, Promptfoo
IoT / OT	Binwalk, Ghidra, Wireshark (Industrial Plugins)

CERTIFICATION ALIGNMENT

CEH · OSCP · eJPT · CompTIA PenTest+ · PNPT · OWASP Testing Guide

CERTIFIED SOC ANALYST (CSA)

Level: Beginner to Intermediate **Modules:** 14 Structured Modules **Focus:** Detection, Monitoring & Response

A structured programme that takes you inside a real Security Operations Centre — covering the tools, processes, and mindset required to monitor threats, triage alerts, and respond to incidents at scale.

Module 1–3 SOC Foundations & Monitoring	SOC roles & types · CIA Triad · OSI/TCP-IP · Log management lifecycle · IDS/IPS · SIEM introduction
Module 4–5 SIEM & Threat Intelligence	Splunk, QRadar, ArcSight, ELK · Query writing · Threat feeds · MISP, AlienVault OTX, VirusTotal · IOC integration
Module 6–7 Endpoint & Network Monitoring	Windows Event IDs · Sysmon · EDR tools · Wireshark · Snort, Suricata · NetFlow & PCAP analysis
Module 8–9 Use Case Development & Detection	Threat modelling · Detection logic · Rule creation · Tuning & false-positive reduction
Module 10–11 Triage & Incident Response	Alert handling · Severity prioritisation · Playbooks & runbooks · Evidence preservation · Chain of custody
Module 12–14 Threat Hunting, Malware & Reporting	MITRE ATT&CK hunting · Sigma, Velociraptor, KQL · Cuckoo Sandbox, YARA · SOC KPIs (MTTD, MTTR) · Compliance: ISO 27001, GDPR, NIST

CERTIFICATION ALIGNMENT

EC-Council CSA · CompTIA CySA+ · Splunk Core Certified User · Microsoft SC-200

CYBER CRIME INVESTIGATION & DIGITAL FORENSICS

Theory: 45 Hours Classroom **Practical:** 15 Hours Capstone Project **Total:** 60 Hours

An investigator-focused programme that teaches you to collect, preserve, analyse, and present digital evidence — with full coverage of Indian cyber law (IT Act 2000/2008, BNS) and court-ready reporting skills.

Module 1–2 Forensics Fundamentals & Cyber Law	NTFS/FAT/EXT file systems · Chain of custody · IT Act 2000/2008 · Section 65B digital evidence · Data protection & privacy laws
Module 3–4 Computer & Disk Forensics	Windows/Linux/macOS artifacts · USB forensics · Disk imaging · Write blockers · Hashing · File carving · Metadata & timestamps
Module 5–6 Memory & Network Forensics	RAM acquisition · Malware traces in memory · Packet capture · NetFlow · Log correlation · Network attack detection
Module 7–8 Mobile Forensics & Malware	Android & iOS architecture · Data extraction · Call/message/media artifacts · GPS & cloud evidence · Incident response lifecycle
Module 9–10 Cyber Crime Investigation & Reporting	OSINT · Dark web basics · Phishing investigation · Expert testimony · Court presentation · Forensic report writing

CAPSTONE PROJECT (15 Hours)

Students receive a real-world case scenario and progress through: Case Planning → Evidence Collection → Forensic Analysis → Report Writing → Viva/Presentation. A complete investigation from scene to court.

CERTIFICATION ALIGNMENT

CHFI (EC-Council) · CCE · EnCE · GCFE (GIAC) · CompTIA Forensics

CYBER PRODUCT DEVELOPMENT

Duration: 30 Days · Structured Daily Progression **Focus:** Full-Stack Secure Product Engineering

The only programme that combines product thinking, full-stack engineering, and security into a single 30-day journey — producing developers who build secure products from the ground up, not as an afterthought.

Days 1–8
Product & Architecture Foundations

Product lifecycle · Market research · MVP planning · SDLC models (Agile/Waterfall) · System architecture · Monolith vs microservices · Database design

Days 9–16
Backend, Full-Stack & Web Security

Server-side request flow · Authentication & sessions · REST APIs · OWASP Top 10 · Input validation · Access control · CSRF/XSS/SSRF/injection risks

Days 17–30
API Security, DevSecOps & Compliance

API auth · Rate limiting · CI/CD security · Dependency scanning · Secret management · Static & dynamic analysis · VAPT basics · Privacy · Incident response · AI-assisted development

TECHNICAL SKILLS GAINED

Backend Dev APIs · Auth · Error handling · Logging	Security Testing SAST · DAST · Pentesting basics	DevSecOps CI/CD · Docker · Secret mgmt · Scanning	AI Integration AI-assisted coding · LLM security analysis
--	--	---	---

CAREER PATHS & OUTCOMES

Roblocksec graduates are equipped for the following in-demand roles across every sector of the cybersecurity industry:

Penetration Tester Ethical Hacker, Red Teamer, Bug Bounty Hunter	SOC Analyst Tier 1/2 Analyst, Threat Hunter, Detection Engineer	Digital Forensics Investigator DFIR Analyst, Cyber Crime Investigator, Malware Analyst	Secure Product Developer DevSecOps Engineer, Security Engineer, Product Security Lead
--	---	--	---

CERTIFICATION READINESS MAP

Offensive Security	CEH · OSCP · PNPT · eJPT · CompTIA PenTest+
Defensive / SOC	EC-Council CSA · CompTIA CySA+ · Splunk Core · Microsoft SC-200
Digital Forensics	CHFI · CCE · EnCE · GCFE · CompTIA Forensics
Product / DevSecOps	CSSLP · CompTIA Security+ · AWS Security Specialty
